Image Captioning with Recurrent Neural Networks

Prohlášení

Prohlašuji, že jsem tento semestrální projekt vypracoval samostatně pod vedením pana Michala Hradiše.

Poděkování

Zde je možné uvést poděkování vedoucímu práce a těm, kteří poskytli odbornou pomoc.

Contents

Chapter 1

Introduction

Klasicky popis toho co se tady bude dit, jak je to dulezite, atd.

Chapter 2

Neural networks

General idea of neural networks was slowly emerging after World War II. Perceptron, as a single neuron unit, was created in 1958 by Frank Rosenblatt[1], but became popular only after creation of backpropagation algorithm in 1975. At that time neural nets have not reached massive popularity, not because they are not working, but due to small computing power of machines back then and lack of datasets. Recently (after 2000) neural nets became popular again. Mostly because researchers dealt with the problems from before and successfully applied neural nets in multiple fields like computer vision, speech recognition and natural language processing.

Since then various useful architectures and algorithms are now introduced almost every month. There is vast amount of various architectures and algorithms, in this chapter, I will describe only a couple – those, which are used in this thesis.

2.1 Recurrent neural nets

Feedforward neural nets are extremely powerful models, which can be highly parallelized. Despite that, they can be only applied to problems with inputs and outputs, which have fixed dimensionality (e.g. one-hot encoding vectors). This is a serious drawback, as many of the real-world problems are defined as sequences with lengths that are unknown to us in beforehand. Soon recurrent neural networks were introduced and they proved to be very useful to this kind of task.

There is vast amount of different kinds of neural networks, many not suitable for sequential tasks

Zduraznit problem vanishing a exploding gradientu

Popis toho jak umi pracovat se sekvencema, predikci dalsiho prvku, da se pouzit na spoustu veci, zvuky, ceny na burze, preklady, predikci textu.

2.1.1 LSTM – Long Short-Term Memory

Jak to vyresilo problem vyse. Pridat i rovnice, ktere pouzivam ja, rozebrat dopodrobna.

[5]

[1]The perceptron: A probabilistic model for information storage and organization in the brain. Rosenblatt, F. Psychological Review, Vol 65(6), Nov 1958, 386–408.

2.1.2   GRU – Gated Recurrent Unit

Zminit jako updatovanou verzi

[1] [4]

2.1.3   Processing text with RNN

Mozna trochu upravit nazev. (Character level and word level embeddings)

Popis toho jak se pracuje s textem v rnn, ze to je taky sekvence. Character level, word level, embeddings. Popis rozdilu toho jak funguji preklady a generovani dalsiho prvku sekvence.

2.2   Convolutional neural nets

Kratky uvod do toho, kde se pouzivaji, jak se vyvinuly, jednoduchy popis toho jak funguji. Obrazek?

Asi neni potreba davat subsekce na vrstvy, staci popsat jak to funguje vsechno dohromady, jednotlive vrstvy ve vetach v jednom odstavci. Obrazek. V diplomce rozpracovat vic.

Chapter 3

Experiments

Kapitola jen na semestralni projekt. V diplomce ji odstranim.

Jak se to implementuje, jake knihovny se pouzivaji - Caffe, Theano, TensorFlow, Torch. Popsat ze Torch bude v tehle kapitole.

Budu popisovat veci co jsem zkousel implementovat v Torchi.

3.1 Torch

Torch se zrecykluje do diplomky.

Udelat tady tabulku o ruznych balicich co torch ma

Jak funguji rekurentni site v Torchi.

Nacitani modelu z Caffe, ukladani v Torchi...

3.1.1 nn, nngraph

3.1.2 rnn

3.1.3 Other packages

loadcaffe, optim,...

3.2 Predicting next character in sequence

Jak jsem to udelal, co to dela, ukazky.

Reference na Karpathyho char-rnn

Chapter 4

Image caption generation

Znovu uvod k tomu jak je to dulezite a tentokrat jak na tom lidi pracuji, co je potreba
a jak se to hodnoti.

4.1 Related Work

Dat tomu nejake lepsi jmeno, clanky o popisovani obrazku ktere jsem cetl, pouzil.

4.1.1 Show and Tell

[10] [8]

Clanek z Coco od Googlu.

Zminit i strojovy preklad (Sequence to Sequence Learning with Neural Networks), ar-
chitektura encoder, decoder

4.1.2 Show, Attend and Tell

[11]

Clanek z Coco z Montrealu/Toronta

4.1.3 From Captions to Visual Concepts and Back

[3]

Clanek z Coco od Microsoftu, mrknout se i na pokracovani v druhem clanku

4.1.4 Long-term Recurrent Convolutional Networks for Visual Recogni-
tion and Description

[2]

Clanek z Coco z berkeley

4.2 Datasets

COCO, Flicker, popis jake jsou.

4.2.1 MS COCO

4.2.2 Flickr 30k,8k

4.3 Evaluation metrics

BLEU, cIDER, jak se pouzivaji, co delaji...

4.3.1 BLEU

[7]

4.3.2 CIDEr

[9]

4.3.3 METEOR

[6]

Chapter 5

Model

Do semestralniho projektu nebo az na diplomku?

Design modelu, co chci pouzit, jake metody chci zkusit.

Polozit si principialni otazku a zjistit jestli to nejak pomuze, jak to funguje.

5.1   Architecture

Architektura modelu, jake matematicke modely jsem pouzil, bez implementacnich detailu.

5.2   Training details

Popis pomoci jakeho algoritmu jsme trenovali, s jakyma parametrama, minibatches, datasety.

Chapter 6

Conclusion

Udelat jeden zaver pro semestralni projekt, pak ho prepsat pro diplomku.
